

# Free Vein Screening

Candidates should have visible varicose or spider veins, leg ulcers, or history of blood clots.

***Our quick, non-invasive screening captures images of your veins using a tablet—no needles, no discomfort, just a fast vascular health check.***

Don't let heavy, swollen legs or unsightly veins slow you down. Discover how the latest non-invasive options can help get you where you want to be.

Our vein specialist, part of the department of vascular surgery at Englewood Health, will screen for vein disease by using contact-free thermography technology to identify flow in abnormal veins. ThermPix™ is the most advanced vein screening tool available. Patients will be able to see the images on the tablet along with the doctor, and results will be immediately discussed.

There is no cost for these events. When you register, you will be assigned a time to minimize interactions and groups. If you are referred for treatment, most treatments are covered by insurance and take less than one hour.
